HSCPS Educational Platform

The educational platform is based on **Moodle** - Open Source software. It is an online remote learning environment available in web browsers. It enables the creation and administration of online courses and the management of the entire distance learning process.

During the period from March 16 to May 22, 2020 classes were conducted using the educational platform.

As part of full- time studies: 19 e-learning courses were launched for 49 students of the first year.

As part of postgraduate studies: 8 e-learning courses were launched for 248 students which are candidates for prison officers.

The examination session for postgraduate students was planned in the form of remote tests. Tests for each group were automatically opened on designated dates and times. Each student was able to choose one of the three scheduled dates for taking the test. Exam results appeared immediately after it was terminated.

Currently, e-learning courses are launched to support stationary education.

In case of a need to switch to remote education, the courses will be launched in full extent, with the possibility of synchronous contact, through the chatrooms or virtual meeting rooms or asynchronously using other forms of distance work.

Thank you for your attention!
